DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 16-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Williams et al (5,485,027). The Williams reference shows all of the structural features of the claimed invention including pull-up transistor arrays which include a substrate, an epitaxial layer and N double diffused MOS transistors laterally arranged in the epitaxial layer, wherein one of the source/drain regions is common to several transistors, and one of the source/drain regions is unique to each transistor. See, for example, the embodiment shown by Williams in Fig. 9B, where a common source is employed in an N channel pull-up device. See the discussion at col. 8, l. 26-30, and at col. 5, l. 35-55. Also, as discussed at col. 8, l. 19-22, Fig. 7 shows both vertical and lateral high voltage DMOS devices. See, also Fig. 13 where a commonly shared source region (S/B) surrounds the drain region.

Allowable Subject Matter

Claims 4-15 are allowed.
